The world is getting more connected every day, and more gaming trends and preferences are emerging around the globe. We want to know which console is preferred the most based on different regions. We will compile results from all over the world and determine if any regional trends might shape the gaming industry.

The data frame **df** we created will provide us with the total sales (global, NA, EU, JP, Others) based on different platforms. The data frame will look like this

	Platform	JP_Sales	Platform	NA_Sales	Platform	EU_Sales	Platform	Other_Sales	Platform	Global_Sales
